A

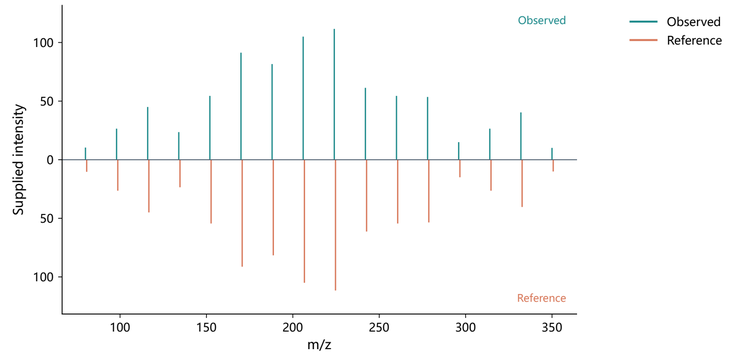

Coverage, splice junctions and isoforms

Arc width = supplied count
0.045 pt per count
Arc lane = layout only

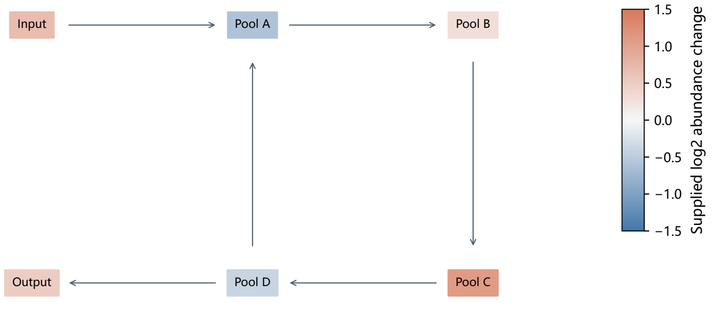

Synthetic segment; 0-based half-open intervals; increasing position, strand not inferred; Supplied coverage in a common scale for both samples; Supplied junction read count; zero counts retained; arc height is layout only

B

No peak matching, compound identification, rescaling or deconvolution performed.

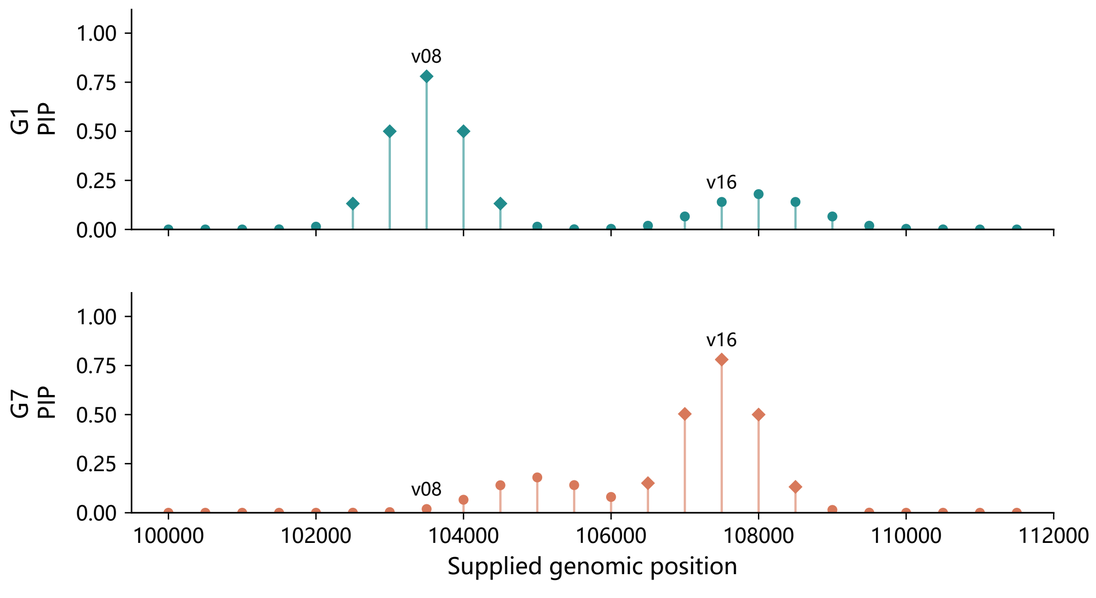

C

Known-map arrows encode supplied topology; node abundance does not encode flux.

D

Variant posteriors across supplied signals

Synthetic assembly and segment; supplied one-based variant positions; Frozen multi-signal PIPs and supplied credible-set membership; no probability normalization
